## NeoColab\_REC\_CS23231\_DATA STRUCTURES

### REC\_DS using C\_Week 1\_COD\_Question 4

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

As part of a programming assignment in a data structures course, students are required to create a program to construct a singly linked list by inserting elements at the beginning.

You are an evaluator of the course and guide the students to complete the task.

##### ***Input Format***

The first line of input consists of an integer N, which is the number of elements.

The second line consists of N space-separated integers.

##### ***Output Format***

The output prints the singly linked list elements, after inserting them at the beginning.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

78 89 34 51 67

Output: 67 51 34 89 78

### **Answer**

```
#include <stdio.h>
#include <stdlib.h>

struct Node {
    int data;
    struct Node* next;
};

// You are using GCC
typedef struct Node node;
void insertAtFront(node** head,int x)
{
    node *newnode;
    newnode=(node*)malloc(sizeof(node));
    newnode->data=x;
    newnode->next=*head;
    *head=newnode;
}
void printList(node *head){
    Node *current=head;
    while(current!=NULL){
        printf("%d ",current->data);
        current=current->next;
    }
}

int main(){
    struct Node* head = NULL;
```

```
int n;
scanf("%d", &n);

for (int i = 0; i < n; i++) {
    int activity;
    scanf("%d", &activity);
    insertAtFront(&head, activity);
}

printList(head);
struct Node* current = head;
while (current != NULL) {
    struct Node* temp = current;
    current = current->next;
    free(temp);
}

return 0;
}
```

**Status :** Correct

**Marks : 10/10**
