### REC\_DS using C\_Week 1\_COD\_Question 3

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Imagine you are working on a text processing tool and need to implement a feature that allows users to insert characters at a specific position.

Implement a program that takes user inputs to create a singly linked list of characters and inserts a new character after a given index in the list.

##### ***Input Format***

The first line of input consists of an integer N, representing the number of characters in the linked list.

The second line consists of a sequence of N characters, representing the linked list.

The third line consists of an integer index, representing the index(0-based) after

which the new character node needs to be inserted.

The fourth line consists of a character value representing the character to be inserted after the given index.

### ***Output Format***

If the provided index is out of bounds (larger than the list size):

1. The first line of output prints "Invalid index".
2. The second line prints "Updated list: " followed by the unchanged linked list values.

Otherwise, the output prints "Updated list: " followed by the updated linked list after inserting the new character after the given index.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 5

a b c d e

2

X

Output: Updated list: a b c X d e

### ***Answer***

```
// You are using GCC
#include<stdio.h>
#include<stdlib.h>
int main()
{
    int n;
    scanf("%d",&n);
    char *ptr;
    ptr=(char *)malloc((n+1)*sizeof(char));
    for(int i=0;i<n;i++){
        scanf(" %c",(ptr+i));
    }
}
```

```

int pos;
char letter;
scanf("%d\n %c",&pos,&letter);
if(pos<n)
{
    for(int i=n;i>pos;i--){
        *(ptr+i)=*(ptr+(i-1));
    }
    *(ptr+(pos+1))=letter;
    n++;
    printf("Updated list: ");
    int i;
    for(i=0;i<n;i++)
    {
        printf("%c ",*(ptr+i));
    }
    printf("\n");
}
else
{
    printf("Invalid index\nUpdated list: ");
    for(int i=0;i<n;i++){
        printf("%c ",*(ptr+i));
    }
}
}
}

```

**Status :** Correct

**Marks :** 10/10
